Dr. T. Caspersson
Karolinska Institut
Stockholm 60, Sweden

Dear Professor Caspersson:

I trust that this will have reached you in due season after your return from an enjoyable and profitable trip to Japan.

I am writing you just to remind you of your promise to look at the UV spectra of a few individual bacteria by means of your new recording spectrophotometer. E. coli strain B, which you can readily get from Carl-Goran Hedén, would be entirely satisfactory.

Yours sincerely,

Joshua Lederberg
Professor of Genetics
